Have you ever wondered how the large pet companies produce some of their products? Although many major pet companies have in-house manufacturing capabilities, most use third party companies for some and sometimes all their manufacturing and packaging.

For over 25 years, Telmark has been providing these types of services to the pet industry. From product and packaging design to manufacturing and packaging, Telmark is a leading supplier of many types of pet products.

Telmark formulations for all types of pet vitamins and supplements including popular glucosamine tablets. Our turnkey approach makes one-stop-shop a cost-effective way to concentrate your resources on marketing your products, not ordering and expediting packaging components.

Telmark works with both large and small companies to produce high-quality pet products. We manufacture pet grooming products, creams & ointments, pet dental, stain & odor remover, and many other pet-related items.

We would feel honored to work on your project/s. Please give us an opportunity to enhance your current product line and/or develop new products so that your company can grow in this ever-expanding market.
