

UniTube

Unit-of-Use Packaging

- User can easily “squeeze” contents with a 40% better dispensing yield than a pouch
- “Smooth” and rounded sides make easy to hold with one hand
- Hygienic unit dose eliminates cross contamination from multi-use tubes or bottles
- EasyTear® perf makes opening easy (senior friendly)
- Full-color printing “end-to-end” on 100% of the container.
- Uses reverse printing that traps and protects inks
- UniTubes 4-layer laminates are perfect for cosmetic and personal care products
- Available in recycled film material.

ISO 22716 COMPLIANT: 2008
ISO 13485 COMPLIANT: 2003
ISO 9001 COMPLIANT: 2008

Telmark Packaging Corporation, on the forefront of unit-of-use packaging, introduces UniTube. UniTube economically melds the best features of a foil pouch and a conventional squeeze tube. UniTube combines the barrier protection, graphic capabilities and low cost of a pouch with the directional-flow, ease-of-opening and look of a tube.

Unlike a pouch, the UniTube is produced using end-to-end printing. No longer do graphics and color bleeds need to be compromised in order to avoid seal areas. And, no more seam plates to fill in plate gaps. UniTubes allow for ultimate graphic creativity.

UniTubes incorporate the SmarTear™ opening system. No more struggling to open the package. Simply twist and pull and the package opens easily every time.

UniTube can also be made using recycled materials. Using our PaperPack laminate takes advantage of technological breakthroughs bringing materials that are more environmentally friendly.

These uniquely shaped packages will add distinction to your sampling programs and product regimens. And, UniTubes are easily assembled onto sampler cards without the need of glue and other adhesives. In fact, Telmark offers both the production of the sampler cards and assembly as part of our extensive services.
