- Package a wide array of liquids (1 – 100 grams)
- Leave individual thermoforms attached in a strip to present a regimen of product/s
- Fill multiple products at one time
- Ideal as samples
- Substantial enough to be used as retail packages
- Combine pre-printed film and labels for dramatic graphics
- Easily attach to die-cut cards to increase billboard

Can you imagine being able to produce a customized, beautifully decorated, filled, single-dose liquid package designed to conform to virtually any shape for just pennies apiece?

Thermoforms are attractive, economical, easy to open, tamper-evident and can be utilized to hold one product or a regimen of several different products. They provide an excellent medium for accurately replicating the shape of primary packages greatly increasing product recognition.

Thermoforms are produced by feeding two pre-printed films through a mold that forms the film into shapes. At the same time as the package is formed it is filled and sealed. Optional labels are then attached on-line. The result is an extremely attractive, functional and economic unit-of-use package.

Thermoforms are ideal for packaging personal care products (skin care, shampoo, conditioner, mouth wash, fragrance, bath gels, cosmetics, etc); liquid vitamins & food supplements; dental products; contact lens solutions; insect repellents; air fresheners; water softeners; potpourri refills; automotive supplies; glues & adhesives; laundry detergents; wax & polish; and even food.
